The billionaire also told the conference that his two biggest priorities at the moment are achieving self-driving in Tesla cars and getting the SpaceX Starship, a new rocket model, into orbit, Reuters reported.

Many climate experts agree that the world could not simply switch off all reliance on fossil fuels like oil and gas immediately. But they have also urged local and national governments to promote renewable energy like wind, solar and hydropower while weaning society off of planet-warming fossil fuels.

One point of contention for some climate experts and activists is nuclear power – which some environmentalists see as a potential hazard, but others see as a source of carbon-free energy. At the conference in Norway, Mr Musk said that he supported nuclear energy, according to *Bloomberg*.

'The climate crisis is a reality': Africa's summer of extremes

Against the odds: The fight to save sea turtles in Ras Baridi

The climate crisis — mostly powered by burning fossil fuels like oil, gas and coal — is expected to bring more frequent and more intense disasters like floods, wildfires, storms and droughts to countries all over the world.

Just this year, the world has seen devastating and deadly floods, from **Pakistan** to **Kentucky** and **Uganda** – alongside massive, devastating wildfires from the **southwest US** to **Siberia**. In addition, intense heatwaves have pummelled **Europe**, **Texas** and **India**, while ongoing **drought** in the western US has put long-term water supplies in the region at risk.

whatever environmental damage their policies cause/allow, particularly when not immediately observable. [And I've heard almost nothing of Greta's name in the mainstream corporate news-media since COVID hit the world.]

Meanwhile, (neo)liberals and conservatives are overly preoccupied with vociferously criticizing one another for their politics and beliefs thus diverting attention away from the planet's greatest polluters, where it should and needs to be sharply focused. Albeit, it seems to be conservatives who don't mind liberally polluting the planet.

Anyone who's stated priorities are puerile folly like self-driving cars, or space rockets, are less than credible spokespersons for anything actually important.

"puerile folly like self-driving cars"

You haven't really thought that one through, have you?

Nor did Elon apparently, considering he's been going on about it for years but they best they've achieved is fancy cruise control. Almost like designing sufficient sensors and programming to deal with the almost infinite scenarios a car might be in is practically impossible. Not to mention a liability nightmare when things go wrong.

We should be fracking, ramping up North Sea oil exploration and digging for coal. Anything but being dependent on the likes of Russia for energy.

Nope, we should not be doing those things. That would be really short term thinking and screw us all long term.
